

Hot Tub Guide

Master Spas LH 7 · 6-Person Hydrotherapy Spa
lynxresort-WPB · West Palm Beach, FL
www.lynxresort.com

Your hot tub is the heart of the wellness experience at lynx resort-WPB. The Master Spas LH 7 features 40 hydrotherapy jets, ergonomic seating for 6, Colorscape LED lighting, and a StressRelief Neck & Shoulder Seat — all designed to melt away tension and restore your body. This guide covers everything you need to power up, customize your soak, and leave it ready for the next guest.

Dimensions	84" x 84" x 36"	Jets	40 Hydrotherapy Jets
Capacity	6 Persons	Pumps	2 Therapy Pumps
Water	295 Gallons	Controls	INK300 Topside Panel
Power	240V / 50 Amp	Lighting	Colorscape LED
Filtration	40 sq ft Filter	Special	StressRelief Neck Seat

SAFETY FIRST

Please read carefully before entering the hot tub

Water Temperature

Max safe water temp is 104°F (40°C). Lower temps recommended for children. Always verify with the thermometer on the control panel before entering.

Limit Soak Time

Limit sessions to 15 minutes maximum at high temperatures. Exit immediately if you feel dizzy, faint, or overheated. Hyperthermia is a real risk.

No Alcohol or Drugs

Never use the hot tub after consuming alcohol or drugs. This greatly increases the risk of unconsciousness, hyperthermia, and drowning.

Children Require Supervision

Children must be supervised by an adult at all times. Children under 5 are at especially high risk of accidental drowning. Never leave children unattended.

Keep Hair & Jewelry Clear

Long hair must be tied up and kept away from suction fittings. Loose jewelry, loose clothing, and swimsuit strings can become trapped in the drain.

Health Conditions

Persons with heart disease, high/low blood pressure, diabetes, or pregnancy must consult a physician before using. Medications may intensify heat effects.

Your safety is our priority. If anything feels wrong — exit the spa immediately. Message host Megan via Airbnb if you need assistance.

STEP-BY-STEP OPERATING GUIDE

Follow these 6 steps for the perfect soak

STEP 1

Remove Cover & Check Water Level

Before powering up, prepare the hot tub:

- Unlatch all 4 cover straps and fold the cover open or remove it
- Place the cover in a clean, dry spot — never on the ground or wood decking
- Check that the water level is at least 1 inch above the filter housing opening
- If the water looks low, use the garden hose to top up through the filter area
- Visually inspect the water — it should be clear with no unusual odor

STEP 2

Power On & Check the Control Panel

2 PUMP MODELS

The hot tub is always powered on and maintaining temperature. The **INK300 topside control panel** is your main interface:

JETS 1 button — controls main pump (once = low, twice = high speed)

JETS 2 button — controls second pump (once = on, again = off)

LIGHT button — toggles Colorscape LED (cycles through colors)

UP/DOWN button — adjusts the set temperature target

Display — shows current water temperature in °F

NOTE: The display shows **CURRENT** water temp. Press and hold **UP/DOWN** to view/change the **SET POINT**. Never set above 104°F (40°C).

STEP 3

Set Your Desired Temperature

The hot tub is typically pre-set to **100°F** — ideal for most guests.

To adjust the temperature:

1. Press and hold the **UP/DOWN** button to raise or lower the set point
2. The **Set Point icon** (thermometer symbol) will flash on the display
3. Release after 3 seconds to confirm — the display returns to current temp
4. The heater will automatically work to reach your set temperature

Recommended ranges: Relaxation: 100°F · Therapy: 102°F · Max safe: 104°F

STEP 4

Turn On Jets & Customize Your Soak

Once in the water, personalize your hydrotherapy experience:

JETS 1 (main pump) — press once for **gentle low-speed** massage, press again for **powerful high-speed** jets. Turns off after 15 min safety timer.

JETS 2 (second pump) — activates the secondary jet zone. Great for targeting different seat areas.

Individual jets — rotate each jet face to aim the stream where you need it.

Air controls (valves on the spa rim) — open to mix air with water for a more vigorous massage.

STEP5

Set the Mood with Colorscape Lighting

Your hot tub includes a built-in **Colourscape LED system** for evening ambiance:

- Press the **LIGHT** button once to turn the lights on
- Press rapidly (within 2 seconds) to **cycle through color modes** — white, blue, teal, red, green, and slow color-changing sequences
- Press and hold to turn lights off, or they auto-shutoff after 2 hours

The LEDs are perfect for evening soaks. Combined with the outdoor string lights and the warm West Palm Beach air — pure magic.

STEP6

Exit Safely & Replace the Cover

When you're ready to finish your session:

1. Press **JETS 1** and **JETS 2** to turn off all pumps
2. Press **LIGHT** to turn off the LED lighting
3. Exit carefully using the built-in steps — surfaces are slippery when wet
4. Rinse off with the outdoor shower before heading back inside
5. Place the **spa cover back on** and latch all 4 straps — this retains heat, reduces energy use, and keeps the water clean for the next use
6. Towels go in the laundry area inside the house

WATER CARE — Keeping It Clean for Everyone

■ Test Before Each Use Check pH (7.2–7.6) and chlorine (2–4 ppm) before entering. Test strips are in the storage cabinet.	■ Rinse Off First Shower before entering. Body oils, lotions, and sunscreen contaminate water and clog filters.
■ No Soaps or Bath Products Never add bubble bath, oils, or soaps — these cause excessive foam and damage equipment.	■ No Glass Near the Spa Bring plastic or metal cups only. Broken glass near the spa is extremely hazardous.
■ Cover When Not in Use Always replace the cover after use. This retains heat, reduces chemicals, and keeps debris out.	■ Please Report Issues Water looks cloudy, smells unusual, or jets aren't working? Message Megan right away.

QUICK REFERENCE — AT A GLANCE

Everything you need in 60 seconds

STEP

1

PREPARE

Remove cover & latch · Check water level is 1" above filter · Water should be clear

STEP

2

POWER ON

Hot tub is always powered · Control panel shows current water temp in °F

STEP

3

SET TEMP

Press and hold UP/DOWN button to set target temp · Recommended: 100°F · Max: 104°F

STEP

4

START JETS

JETS 1: once = low, twice = high · JETS 2: once = on · Auto-off after 15 min

STEP

5

SET LIGHTS

LIGHT button to turn on · Rapid press = cycle colors · Auto-off after 2 hours

STEP

6

POWER OFF

Press JETS 1 + JETS 2 to stop pumps · LIGHT to off · Exit carefully

STEP

7

REPLACE COVER

Cover on and all 4 straps latched · Towels to laundry · Rinse off before heading inside

QUICK TROUBLESHOOTING

ISSUE	LIKELY CAUSE	WHAT TO DO
Jets not running	Pump air locked	Press JETS off/on 3x rapidly. If no flow, message Megan.
FLO error on display	Low water / blocked filter	Check water level. Clean or check filter. Restart power.
OH error on display	Water overheated (108°F+)	DO NOT ENTER. Remove cover to cool. Call Megan.
Cloudy water	pH imbalance / dirty filter	Test strips in cabinet. Add chemicals if needed. Call Megan.
Weak jet pressure	Jets closed or air control closed	Twist each jet face open. Open air valves on spa rim.
GFCI keeps tripping	Electrical fault	Do not reset yourself. Turn off the breaker and call Megan.

CONTROL PANEL ERROR CODES

CODE	MEANING	ACTION
FLO	No water flow detected	Check water level, clean filter, ensure slice valves are open.
OH	Overheat — 108°F+	DO NOT ENTER. Cool the water by opening cover. Call Megan.
HL	Heater flow loss — 119°F	DO NOT ENTER. Check filters and water level. Call Megan.
CoE	Communication error	Turn spa off and back on at breaker. If persistent, call Megan.
Prr	Probe error	DO NOT ENTER. Turn power off/on. If persistent, call Megan.
AOH	Equipment area overheating	Remove skirt panel to ventilate. Call Megan if persists.
